The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action. The RCE is accepted.

Claims 2, 18-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- a) In claim 2, it is not clear how a carbon black can be from both groups.
- b) Claim 24 contains improper Markush language. 'a' group is improper.
- c) Claim 19 is unclear as to what 'stronger structure' means.
- d) Claim 20 is unclear, as FDA requirements can change. Perhaps 'generally recognized as safe' is meant.
- e) Claims 18, 19 and 21-25 are unclear as to the basis for comparison. Compared to which ones? The word' regular' appears only in claim 19. What does it mean and why is this claim differently worded? Does claim 18 (for example) imply that the present carbon blacks have higher conductivity than any previously existing carbon black ever?

Claims 1-3, 8, 9, 17-25 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Yoshimura et al. 4693879.

The reference teaches, in the entire document but in col. 8 and 9 especially, carbon black having the claimed properties subject to heat treatment. The intended use does not limit the product. Although the heat treatment is not identical to what is claimed, where the examiner has found a substantially similar product as in the applied prior art the burden of proof is shifted to the applicant to establish that their product is patentably distinct not the examiner to show that the same process of making, see In re Brown, 173 U.S.P.Q 685, and In re Fessmann, 180 U.S.P.Q. 324. No difference is seen in the effect of the treatment (claim 9).

Claims 1-3, 8, 9, 17-25 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Johnson 3408164.

Application/Control Number: 10/666,048 Page 3

Art Unit: 1793

The reference teaches, in the entire document but in col. 8 and 9 especially, carbon black having the claimed properties subject to heat treatment. The intended use does not limit the product. Although the heat treatment is not identical to what is claimed, where the examiner has found a substantially similar product as in the applied prior art the burden of proof is shifted to the applicant to establish that their product is patentably distinct not the examiner to show that the same process of making, see In re Brown, 173 U.S.P.Q 685, and In re Fessmann, 180 U.S.P.Q. 324. No difference is seen in the effect of the treatment (claim 9).

Applicant's arguments filed 1/18/08 have been fully considered but they are not persuasive.

Concerning the '112 rejections, the specification portion cited (the details left blank should be inserted) does not describe how a carbon black can be a thermal AND furnace black. Given that applicant is treated carbon blacks made by others, it does not seem that this would impart patentability. The examiner sees from the specification how the original carbon black can be a thermal OR furnace black, but this is not claimed. Claim 20 is not clear as to when 'current' refers to. The filing date of the specification? 1/28/08? 2/19/08? Some unspecified date in the future? The examiner's suggested language should be adopted. Claims 18, 19 and 21-25 have not been amended since the rejection was made.

Concerning Yoshimura, claim 1 (for example) does not require any particular temperature. Even if it did, it is a product claim and no difference is seen in the actual product. The claims do not recite d002 or any property indicative of the degree of graphitization, so the arguments are not persuasive. The high temperature of Johnson would seem to cause graphitization and the S content is not claimed.

Any inquiry concerning this communication should be directed to examiner Hendrickson at telephone number (571) 272-1351.
